

SIMPLE VISUAL FOXPRO QUIZ (TIME ALLOWED: 20 MINUTES)

1. What is the output of the following program?

```
private m.lnVar1
local m.lnVar3
m.lnVar1=1
m.lnVar2=2
m.lnVar3=3
do haha
? m.lnVar1, m.lnVar2, m.lnVar3

procedure haha
local m.lnVar3
public m.lnVar2
m.lnVar3=4
m.lnVar2=5
m.lnVar1=6
endproc
```

2. How do you make a form modal?
3. Name one control in VFP that could not be sub-classed.
4. What does `DODEFAULT()` do? What about `NODEFAULT`?
5. What will `TABLEREVERSE(.T.)` do when there is **NO** buffering?
6. Say you have a form with a label, a text box and a command button. Describe the order of instantiation.
7. Name one website, one news server, one book and one third-party tool for VFP.
8. List the objects that can be found in `DataEnvironment`.
9. Name two ways for VFP to retrieve data from Microsoft SQL Server.
10. When you open a `VIEW`, will the tables accessed by the `VIEW` be opened automatically?
11. How do you pass parameters to `FORM.SCX`?
12. Given following 2 tables. Tabulate the output of the three SQL statements.

INVTRAN.DBF

refno	price
Apple	2

INVOICE.DBF

refno	amt
Apple	1
Banana	3

- A) `SELECT REFNO, SUM(AMT) FROM INVOICE GROUP BY REFNO`
- B) `SELECT * FROM INVOICE LEFT JOIN INVTRAN ON INVOICE.REFNO=INVTRAN.REFNO`
- C) `SELECT * FROM INVOICE, INVTRAN WHERE INVOICE.REFNO=INVTRAN.REFNO`
